THYROID DISEASE

Edited by prof. Sh. M. Chyngyshpaev

AUTHORS:

Aidaraliev Arsen Asylbekovich — doctor of medical science

Akhunbaev Nelli Isaevna — doctor of medical science, professor

Akhunbaev Stalbek Mederovich — doctor of medical science, associate professor

Bebezov Hakim Suleimanovich — doctor of medical science, professor

Vasilevskiy Mikhail Grigorevich — doctor of medical science, professor

Shanazarov Almaz Sogonbaevich — doctor of medical science, professor

Chyngyshpaev Shamil Mukashevich — doctor of medical science, professor

Chyngyshpaev Daniel Shamilevich — candidate of medical science

Content:

PART I.

Modern conception about morphology and physiology of the thyroid gland ...	9
1.1. Anatomy and topography of the thyroid gland (TG)	9
1.2. Changes of the thyroid gland's volume with age	12
1.3. Changes of the thyroid gland's volume in children of preschool age	13
1.4. Physiological role of the thyroid gland	19
1.5. Role of iodine in the body of humans and animals	20
1.6. General effects of the thyroid hormones	20
1.7. Role of the thyroid gland in the iodine balance	21
1.8. Functional features of the thyroid gland in high mountains' conditions	24

PART II.

Classification of the thyroid gland's disorders	27
2.1. Classification of the thyroid gland's disorders	27
2.2. International classification of the thyroid gland's disorders	28
2.3. Classification of the thyroid gland's pathology by Dedov I. I. et al., 2008 ...	30
2.4. Structure and prevalence of the thyroid gland's disorders in areas with natural iodine insufficiency	32

PART III.

Differential diagnostics of nodes in the thyroid gland	35
---	-----------

PART IV.

Anomalies and malformation of the thyroid gland	54
4.1. Congenital anomalies and malformations of the thyroid gland	54
4.2. Embryogenesis of the thyroid gland	54
4.3. Functional activity of fetal thyroiditis	57
4.4. Formation of feedback in embryonic period	58
4.5. Types (classification) and clinical manifestation of the thyroidectomy	59
4.6. Retrosternal goiter	61
4.7. Radioisotope diagnostics and treatment of ectopic goiter	67
SUMMURY	69

PART V.

Goiter and nodular formations of the thyroid gland	70
5.1. Definition to "Goiter"	70
5.2. Statistics of nodular formations	72

5.3.	Ecological causes of thyroid nodular formations in Kyrgyzstan	73
5.4.	Ecology — geochemical condition of some regions in Kyrgyz Republic	82
5.5.	Anomalies of underground water and iodine deficiency disorders	88
5.6.	Selective data on radiation ecology of some territories in Kyrgyz Republic	93
5.7.	Ecological evaluation of radiation background in some areas of Kyrgyzstan	95
5.8.	Screening studies of population	105
5.9.	Structure and prevalence of thyroid gland pathology in the regions with environmental iodine deficiency	108
5.10.	Surgical approach in nodular formations of the thyroid gland	110
5.11.	Method of extrafascial resection of the thyroid gland	112
5.12.	Surgical approach to the nodular goiter in elderly age	114
5.13.	Diagnostics and surgical treatment of multinodular goiter	117
	SUMMARY	120
	SUMMURY	120

PART VI.

	Diffuse Toxic Goiter	122
6.1.	Statistics and epidemiology of DTG	124
6.2.	Etiology and pathogenesis of diffuse toxic goiter (DTG)	125
6.3.	Clinical picture of diffuse toxic goiter	139
6.4.	Diagnostics of diffuse toxic goiter	151
	6.4.1. Diagnostics of DTG basing on clinical data	151
	6.4.2. Sonographic study of thyroid gland in patients with DTG	152
	6.4.3 X-ray diagnostics of DTG	153
	6.4.4. Computed diagnostics of DTG	153
	6.4.5. Detection of levels of thyroid hormones and pituitary thyrotrophic hormone	154
6.5.	Cellular immunity in patients with DTG	158
	6.5.1. Phagocyte activity of neutrophils	160
6.6.	Humoral immunity in patients with DTG	161
	6.6.1. Immunoglobulin spectrum in patients with DTG	161
	6.6.2. Antithyroid antibodies	163
	6.6.2.1. Antibodies to thyroglobulin in DTG	163
	6.6.2.2. Antibodies to thyroid peroxidase (TPO)	163
	6.6.2.3. Thyroidstimulating antibodies (TSA)	164
	6.6.2.4. Antibodies to microsomal antigen in DTG	165

6.7. Hormones of adrenal cortex	166
6.8. Laboratory data in DTG	168
6.9. Diagnostic algorithm of diffuse toxic goiter.....	169
6.10. Differential diagnostics of DTG	170

PART VII.

Organizational — methodic aspects of intense plasmapheresis and indications to its application in autoimmune thyroid disorders	173
---	------------

7.1. Regulations for therapeutic plasmapheresis	176
7.2. Technique of discrete PPH.....	177
7.3. Plasma — substituting solutions	177
7.4. Indications and contraindications to plasmapheresis in patients with autoimmune thyroid disorders	178
7.5. Preventive measures of complications	180

PART VIII.

Thyroid cancer	182
-----------------------------	------------

8.1. Statistics and dynamics of the thyroid cancer morbidity	182
8.2. Risk factors related to etiopathogenesis of thyroid cancer	185
8.3. Relation of thyroid carcinoma to endemic goiter	189
8.4. Histological types of thyroid cancer	193
8.4.1. Papillary cancer, cancer from A-cells	194
8.4.2. Follicular cancer	196
8.4.3. Follicular cancer, cancer from B-cells (Askanazy-Gurtle)	198
8.4.4. Non-differentiated thyroid cancer	198
8.5. Medullar cancer of thyroid gland-possibilities of early diagnostics	200
8.6. Lymphoma of thyroid gland	202
8.7. Multinodular goiter and thyroid cancer	203
8.8. Oxyphil-cellular tumors of thyroid gland	204
8.9. Clinical picture of thyroid cancer	205
8.10. Malignant tumors of thyroid gland in children	206
8.11. Thyroid cancer in elderly age	207
8.12. Diagnostics of thyroid cancer	208
8.12.1. Visualization of lymph nodes	209
8.12.2. Visualization of neck lymph nodes by ultrasound study	209
8.12.3. Visualization of lymph nodes by sonography method	210
8.12.4. Serological methods of diagnostics of thyroid cancer	211

8.12.5. Results of molecular — genetic diagnostics of thyroid cancer.....	212
8.13. Treatment of patients with thyroid cancer	213
8.13.1. Therapeutic measures of patients with thyroid cancer with stage IV	214
8.13.2. Laser therapy	215
8.14. Surgical treatment at early stages of thyroid gland	216
8.14.1. Choice of surgical scope depending on the process spread	217
8.14.2. Choice of surgery's scope depending on tumor's morphology.....	219
8.14.3. Surgical approach in low-differentiated thyroid cancer	221
8.15. Surgical treatment of locally spreading thyroid cancer	222
8.16. Clinical importance of thyroid microcarcinoma	224
8.17. Post-operative complications.....	224
8.18. Distant results of surgical treatment of thyroid cancer.....	226
8.19. Life quality of patients with thyroid cancer	232
8.20. Prophylactic medical examination of patients with thyroid cancer	235
8.21. Prophylactics of thyroid cancer	236
SUMMARY	237

PART IX.

Organizational and methodic aspects of intense plasmapheresis and indications to its usage in autoimmune thyroid disorders	238
9.1. Regulations for therapeutic plasmapheresis	241
9.2. Technique of discrete PPH.....	242
9.3. Plasma — substituting solutions	242
9.4. Indications and contraindications to plasmapheresis in patients with autoimmune thyroid disorders	243
9.5. Preventive measures of complications	245

PART X.

Autoimmune thyroiditis: pathogenesis, diagnostics, modern methods of treatment	247
10.1. Etiology and pathogenesis of autoimmune thyroiditis	248
10.2. Anatomic-morphological characteristics of autoimmune thyroiditis	261
10.3. Clinical picture of autoimmune thyroiditis	264
10.4. Diagnostics of autoimmune thyroiditis	277
10.5. Discriminant analysis and algorithm to semiotics and diagnostics of autoimmune thyroiditis	282

10.6. Humoral and cellular links of immune system and functional state of thyroid gland	293
10.6.1. Humoral link of immune system	294
10.6.2. Cellular link of immune system	299
10.7. Distant results of surgical treatment of autoimmune thyroiditis	303
10.8. Dynamics of immunological disorders in patients with autoimmune thyroiditis under the action of monotherapy by plasmapheresis and combined treatment	309
10.8.1. Dynamics of immunological disorders in patients with autoimmune thyroiditis under the action of intensive plasmapheresis	309
10.9. Action of combined treatment (intensive plasmapheresis and thymalin) on immunological parameters	314
